Publisher: Holt

*Environmental Science*

STANDARDS: 3 moderate, 2 limited

USEFUL: 3 extremely, 2 moderately

District	Course	Edition	Standards	Useful	Comments
Saddleback Valley	Into to Environmental Science	2000	Moderate	Extremely	I teach in a continuing education high school. This textbook is extremely useful as it presents the material in an interesting manner so that the students can succeed with it. I would have no problem using this textbook in a traditional classroom as there are plenty of extension lessons to make the textbook challenging for any level of student.
Del Norte	Resource Management	2000	Limited	Moderately	Good text, but weak on physical sciences for teaching an integrated class
LAUSD	Environmental Science	2003	Moderate	Moderately	This is a simple text that requires outside resources. It is not suitable for high school students. There is not enough statistics, geography, mapping, current event topics included in the text. TOO BASIC!
Natomas	Environmental Science	1996	Limited	Extremely	None
Willits	Environmental Science	2004	Moderate	Extremely	None
