Publisher: It's About Time

*Active Physics*

STANDARDS: 2 moderate, 1 limited

USEFUL: 1 moderately, 2 not

District	Course	Edition	Standards	Useful	Comments
San Diego	Physics	2000	Moderate	Not	This book is just a lab manual for physics with an extremely limited amount of text and problems for students. Much of the equipment and labs are of limited value, and the 2nd language students have a terrible time trying to read the college level text.
San Diego	Physics 1-2	1 <sup>st</sup>	Limited	Not	Active Physics is a good idea that fell flat on its face. The intent of getting students to do physics instead of just reading about it is excellent, but lack of alignment to CA standards. the numerous activities that do not meet their own specified objectives, and the excessive number of errors and wrong physics explanations make this a miserable textbook to work with.
Kern	Physics P	?	Moderate	Moderately	Not alligned to the standards, many things missing
